

Are you looking for an effective mosquito repellent that doesn't involve spraying it on? I am Melissa from NorthlineExpress and in this video I will introduce you a line of products that are effective mosquito repellents and can light up your outdoor space as well.

These are ThermaCell Mosquito Repellent [Lanterns](#) and they provide a 15' x 15' zone of protection from biting insects like mosquitoes and black flies. These ThermaCell lanterns are worry free mosquito protection as well. They are easy to use and there's no candle so no open flame or lighter are required.

Rather than a flame these ThermaCell units are powered by a [butane cartridge](#). Using butane allows the units to be cordless and portable while still creating the heat that activates the units. On the units there is a metal grill that you slide the small repellent saturated [mat](#) into. The butane heats the pad and vaporizes the repellent allowing it to rise into the air and get to work. The repellent on the mat is allethrin which is a copy of a repellent naturally found in chrysanthemum flowers. This repellent is safe and will not harm humans or pets. It's effective at repelling black flies, mosquitoes, and no-see-ums.

Within minutes of turning on the unit the repellent creates a 225sq. ft. area which is perfect for most deck, patios, or campsites. All of these lanterns use the same refill mats and cartridge and provide the same amount of coverage. Each butane cartridge will provide up to 12 hours of continuous use and each mat will provide 3-4 hours of repellent. You can reuse the mat if you do not need the entire 3-4 hours of protection at once but I recommend storing them in a Ziploc bag once open.

The [dark bronze ThermaCell Lantern](#) is the most compact affordable full-size lantern at 6.5" tall. It is a Dual-use product, repellent and light can be used together or separately. This unit gives off light but will give off the least amount of light because it only has 3 LED lights. This unit you twist the top to ignite the unit.

Next we have the [ThermaCell patio lantern](#). This lantern is 7.5" tall and features a decorative look to compliment your outdoor setting. It will give off a generous amount of light with the 4 LED bulbs and features the same size protection zone and effectiveness.

ThermaCell also offers the original [Outdoor ThermaCell Lantern](#) its 7.5" tall and features 8 LED lights making it perfect for camping or hiking.

The [ThermaCell Torch](#) isn't really a lantern but it is still a dual purpose light source and mosquito repellent. The Backyard Torch can be used on the included pole, or the table-top stand!

Whether you are camping, or hanging out in your backyard summers not so fun when uninvited flying guests crash your party. Pick one of the ThermaCell lanterns and enjoy a hands off approach to mosquito control that will also light up your patio or campsite. It's like hanging out the do not disturb sign for unwanted flying guests.

These ThermaCell units are all great products from NorthlineExpress, home of the buy and try satisfaction guarantee.
