

No matter what you are doing outside, flying and biting insects are a huge buzzkill. There are plenty of chemicals and insecticides that you can use to try to control them but they are harmful to the local environment and those around you they also require frequent application. I'm Melissa from NorthlineExpress and I would like to introduce you to Remington Solar's [SolaMist system](#).

This insect misting system offers an environmentally-friendly and effective solution to pest control and is completely solar-powered. The unit includes a 20 Watt solar panel that in only two hours provides enough charge-up for a week of spraying time. Plus, solar-powered means you don't need an outlet or fussy cords to power-up-bring the system on camping trips, picnics, RV vacations, and barbecues, and more.

I really like how this unit has taken all of the fuss out of insect control in my yard! The SolaMist saves me time and money by allowing the freedom to program a personalized daily spray schedule from my smartphone or tablet to manage the concentrate usage. Set up was also easy and something that any DIY homeowner can tackle. The system includes everything that you need to get started; a 20 Watt solar panel, a 9 ft. power cord, a pop-up control cover, a color touch screen display, stakes, end caps, ties, 15 spray nozzles, and a 12 gallon reservoir for the concentrate.

To install the unit simply snip the tubing to a desired length and attach nozzles for as much or as little coverage as you need. Place your solar panel in a sunny place with the panel angled towards the maximum angle of the sun. It should only require about 4 hours of light to get a full charge, even in a cloudy day.

The system comes with one free bottle of non-toxic, biodegradable [SolaMist Pro Concentrate](#) specially formulated to kill mosquitoes, spiders, gnats, wasps, ants, flies, and roaches. The system is also Wi-Fi connected so you can either control the system manually via touchscreen or use the downloadable SolaMist app on your smartphone

or tablet to control your unit from any location. The App is available for android and apple devices. It's really convenient because the app allows you to control your unit from anywhere. With the app you can also use an instant one-minute spray button, manage your concentrate usage, and set your spray schedules for each morning and/or evening and spray frequency.

SolaMist was created for you to customize your own mosquito-free zone. It's also another great product from NorthlineExpress, home of the buy and try satisfaction guarantee.
