

When you purchased your [Mosquito Magnet](#) it was all about choosing the right model for your property. Now is the time to ensure that you have all of the accessories that you need for a smooth and successful mosquito season. It is never a good thing when you are dead in the middle of the mosquito season and you run out of the attractant that you need and have to wait days for it to be delivered. During the time that you are waiting on your accessories to arrive the mosquitoes are breeding and moving their way back onto your property. So don't set yourself back in the fight against mosquitoes keep all of your Mosquito Magnet accessories on hand so you are always prepared for combat!

Here are the 3 accessories to never be without:

Attractant Refills – The type of attractant that you use will depend on the type of mosquitoes that you have in your area. Either Lurex3 or Octenol will be the attractant that you will need for your Mosquito Magnet Trap.

[Octenol](#) is a naturally occurring by-product that comes from plants and some animals that ingest large amounts of vegetable matter. Studies have shown that Octenol, when combined with carbon dioxide, is highly attractive to many species of biting insects. The Octenol is in the form of a packet with a peel-off top that is inserted into the Mosquito Magnet. It is recommended that the packet be replaced every three weeks.

[Lurex3](#) is an attractant specifically designed for customers who have the Asian tiger mosquito. Lurex3 is made of natural compounds that simulate human sweat. Customers who live in areas where the Asian Tiger is the predominant mosquito should use Lurex3 instead of Octenol. It is recommended that the packet be replaced every three weeks as well.

Extra Catch Net – Each of the Mosquito Magnet Traps include a catch [net](#).

However, it is recommended that you leave the mosquitoes in the net when you remove it to ensure that all are dead and you do not release any that are still alive when dumping the net. For this reason it would be helpful to have an extra net or two on hand or in the event that the catch net got a small hole or tear. It is always a good idea to have a backup!

Tank Cover – All of the Mosquito Magnet Trap Models are powered by propane and when a propane tank is left out in the elements there is bound to be some rust on the tank. Protect the tank from developing rust by covering it with a tank [cover](#) from Mosquito Magnet. The tank cover is made of a green nylon fabric to match the Mosquito Magnet Traps and has a Velcro seal.
