

So it's mid-summer and you had the best of intentions to do something about your mosquito control but life happens and for whatever reason you didn't really do anything about the mosquitoes in your yard. Don't worry even though it is definitely the best idea to start your mosquito **control** regiment early, it's never too late to get relief from those pesky blood suckers.

## The Best Defense

The best defense for mosquitoes while you're enjoying the outdoors is going to be a good [repellent](#). I know you are going to automatically think if those harsh chemical sprays or lotions but there is a wide variety of personal repellents out there today that don't require application or chemicals! They range from traditional sprays to lanterns. While these products are great at repelling mosquitoes they do not actually kill the mosquitoes or reduce your mosquito population. They quickly and effectively create a "bug free" area so you can enjoy the outdoors! Most of the personal repellents products on the market now do

not contain chemicals, most use Allethrin which is a copy of a repellent that is naturally produced in chrysanthemum flowers and is safe for use around humans and pets.

## Personal Repellent Products

I have some of these safe repellent products that I want to introduce you to that will have the mosquitoes flying away rather than chasing you back inside. They are some of my favorite mosquito repellent products that I have used and Love!

Liquid Net the Ultimate Insect Repellent is a completely DEET free personal repellent. It is made from all natural, pleasant smelling ingredients like lemon grass, cedarwood and citronella oils. These long lasting essential oils can be applied to everyone in your family, including children. Liquid Net comes in these convenient [towelettes](#) that fit in pockets, purses and backpacks.

The Mosquito Personal Repellent [Patch](#) is a unique, natural way to repel mosquitoes, flies, and gnats. The patch contains no harsh chemicals, pesticides or insecticides. It only contains the vitamin Thiamin B1! Research has shown that large doses of Thiamin B1 produce an odor that is not detectable by humans, but is disagreeable to mosquitoes. This is the perfect alternative to chemical sprays for

those hypersensitive individuals. The design of the patch makes it easy to be worn on a discreet part of the body. The patch should be worn for 24 hours and protection will last up to 36 hours.

The Terminix AllClear Personal Repellents use fan-based diffusion technology to circulate their 100% safe mosquito repellent. Using all-natural ingredients like lemongrass, cinnamon, peppermint, & geranium oils, the Terminix Mosquito Repellers are able to create a 15' x 15' mosquito-free zone. The protection will last for up to 18 hours which is 4 times longer than chemical mosquito repellent options. The [sidekick](#) repeller conveniently clips on your belt for portable hands free mosquito protection. The [tabletop](#) version is great for using on the patio.

ThermaCell Mosquito Repellers - The ThermaCell Personal Repellent [Appliances](#) & [lanterns](#) are revolutionary personal repellent devices designed for people on the go. Whether you are hiking, camping, hunting, fishing, or just trying to enjoy the outdoors the ThermaCell mosquito personal repellent appliances will repel annoying bloodsuckers in any environment. Each of the ThermaCell products provides a 15 x 15 foot comfort zone. The repellent mat will provides up to four hours of protection and each butane cartridge provides up to 12 hours of

operation. The lanterns have the option to be used with or without the mosquito repellent, making it even more versatile.
