

Hi I'm Melissa from NorthlineExpress and I am here to introduce you to The No-Chemical, No-Poison Answer to Your Mosquito Problem! Even if you don't think you have a mosquito problem per-say, you actually do! What's that? Mosquito borne diseases! Yes, those like the West Nile Virus and now the incurable chikungunya virus, the ones that take only ONE BITE from a mosquito!

So yes we all have a mosquito problem and it's in the best interest of our health that we take care of it! It's not even that complicated! Those who like a formula to life's great conundrums "no mosquitos=no mosquito bites which = not transmitting a mosquito borne disease! The best ways to get rid of mosquitoes are actually VERY easy. First getting rid of "mosquito Heaven" around your home, standing water and treating any that cannot be removed. Then following up with a repellent to be extra sure! I know what you're thinking great ANOTHER chemical. BUT NO, this is not another chemical! In fact it's actually very strong liquid garlic made from very potent garlic cloves. The garlic used in Mosquito Barrier is a very powerful variety which is much more potent than the garlic found in grocery stores. Garlic has natural sulfur which repels mosquitoes. Since mosquitoes are soft-bodied insects the garlic juice can be very toxic to them in increased concentrations. The juice does not harm humans, pets or plants, but to mosquitoes it can be deadly. The odor of garlic chases them away for as long as they can detect the odor. The odor of sprayed garlic juice becomes undetectable to humans within minutes, but mosquitoes can detect odor as much as 10,000 times better than a human. So even though you can't smell the garlic, they can and they will stay away from the sprayed area for up to a month or longer. If the mosquitoes aren't in your yard, they can't get into your house and your risk of mosquito bites is greatly decreased!

Additionally, Mosquito Barrier, when mixed with canola oil suffocates the mosquito larvae which develop in standing water. Unlike harmful chemicals, Mosquito Barrier is a natural insect repellent that doesn't kill bees or butterflies and is completely safe for children, fish, birds, dogs, cats and other pets. Generally, four applications are enough for the entire mosquito season. Even in the heaviest of infestations the gallon size is almost always enough for the entire year for most homes - including areas where the mosquito is the state bird. So now having a mosquito problem is more than any itchy bug bite wouldn't you want an easy, No-Chemical, No-Poison Answer to Your Mosquito Problem? Mosquito Barrier is a Great product I personally use and recommend from NorthlineExpress Home of the buy and try satisfaction guarantee.
