

If you're like me, you get your firewood cut, and you bring it back to the house. You stack it up, and then you realize that boy, some of these pieces are too big to use or fit into my wood stove. And so you end up using the smaller pieces, and the large pieces end up sitting here. And as you can tell, this wood pile has been sitting here for quite some time, because it's just too large really to use, and actually heavy to carry into the home so we end up using the smaller pieces quite a bit more. And another thing that I typically run across is that when you're out there in the woods, I typically will cut off the top part of the tree, and leave the real meat of the tree, because it's just too large.

If you've ever used a hand held splitting ax, or a splitting maul, or a wedge, you know that that's a lot of work, and it's a lot of energy expended in getting a piece of wood like that split down into size. But there is a lot of wood in there, and we would like to be able to use it. So we're going to demonstrate today the WoodEze Electric Log Splitters. I'm Rob Cochran, owner of Northline Express, and this is the four-ton electric log splitter here. And we have a larger version, a seven-ton two speed splitter, a heavier frame, etc., and we're going to show you how well these split wood and how quickly it is and how safe it is. I hope you enjoy the video.

This is the four-ton electric log splitter by WoodEze. It has four tons of thrusting power. It runs on a regular household 110 current. So you just plug it into an extension cord, and you're good to go. The great thing about the electric log splitter is that they can be used indoors and outdoors. There is virtually no maintenance required on these unlike a gas-powered log splitter that requires you to winterize it, and change the oil, keep gas put in it. Basically, you just plug it in, and you're ready to go. It's a very simple operation. It's got a lot of power, and we're going to demonstrate that right now. This is a piece of oak, and granted, it's a smaller piece. We'll get to some larger ones in moment.

tons of splitting force which runs faster than the seven-ton splitting setting. Transform your ugly, unusable wood pile from this to this with an electric log splitter by WoodEze available at northlineexpress.com.

Thanks for watching. [Get your WoodEze Log Splitter at NorthlineExpress.](http://www.NorthlineExpress.com)
