

Why WE Love The ThermaCell Hand Held Unit!!

Hi I'm Melissa from NorthlineExpress here with the ThermoCell Personal Pest Control Appliance. The repellent creates a 15' x 15' area that is mosquito and fly free, the size of an average deck, patio or campsite. Without greasy, sticky, or oily sprays and lotions the unit offers a silent, no open flame option for establishing a protective barrier from flying insect pests. The mat contains the active ingredient, Allethrin, a synthetic copy of what naturally occurs in chrysanthemum flowers. It works well in outdoor areas where there is minimal air movement. For the best coverage it is best to use it in still air and to place the unit as close to the ground as possible. This will allow the repellent to spread over a maximum area.

The appliance is powered by a single butane cartridge. The butane provides the cordless portable heat that activates the device. The heat generated by the cartridge is directed to the metal grill that is on top of the unit where the saturated repellent mat sits. The heat vaporizes the repellent allowing it to rise into the air and do its job.

As I mentioned earlier the repellent is Allethrin, a copy of the repellent that naturally occurs in chrysanthemum flowers. It effectively repels mosquitoes, black flies, no see-ums and midges. It is a natural repellent that is not going to harm humans or pets in anyway.

This ThermoCell device is very easy to use. Simply insert the butane cartridge into the bottom of the unit and slide the repellent mat into place. Turn the dial clock wise into the on position and push the start button to turn the device on and start repelling. The heating element will warm up and vaporize the repellent providing great repellent power within minutes.

The ThermaCell Mosquito appliance is another great product from NorthlineExpress, home of the buy and try satisfaction guarantee. We're also your one stop shop for all your mosquito control solutions.
